(54) Title: **ENHANCED STORING OF PERSONAL CONTENT**

(57) Abstract: The invention relates generally to the access to and the creation of content in the context of a mobile communications system and more specifically to archiving personal content of mobile users and for providing this content to mobile users in the most flexible and personalized ways. The core of the invention is how personal content acquired by the user may be further enhanced and stored in a safe box-like remote repository for future purposes. At least one remote data repository is assigned for the use of mobile terminals. Personal content is acquired and stored in the mobile terminal. Selected personal content is then transferred between the storage means and the remote data repository through said telecommunications system, the means to include predetermined criteria, the fulfillment of which initiates said transfer.
